

# **[Software Development] Course *Intro***

*Davide Balzarotti*

Eurecom – Sophia Antipolis, France

# Logistic

- Lectures:

- Thursday morning at 9:00
- No labs, your computer is your lab

- Teacher:

- Davide Balzarotti
- EMail: [davide.balzarotti@eurecom.fr](mailto:davide.balzarotti@eurecom.fr)
- Phone: 04 93 00 81 56
- Room: 387

- Office hours:

- Anytime by appointment  
(please send me an email before coming!)

- Web page:

- <http://s3.eurecom.fr/~balzarot/softdev/>

# Why SoftDev?

- Because you come from different universities
  - .. with different backgrounds
  - .. with different programming skills
  - .. with different ability to use a computer
- Most of you grew up using only Microsoft Windows :(
- This course should give you a common background about the concepts of programming and software development in a Unix-like environment
- Prerequisites
  - Very basic knowledge of C
  - Simple algorithms and data structures

# What is this Class About

- **Problem solving**: How to use a computer to quickly solve everyday tasks
  - By using existing tools
  - By developing prototype applications
- Linux **command line** and **Python** programming
- This is an introductory class for newbies  but hopefully everybody can learn something new
- Topics:
  - Unix and its philosophy
  - Mastering the command line interface
  - Python
  - Compilers and Makefiles, subversion and git, GNU autotools, and other development tools

# Why Unix

- Because 50% of what you know about computing becomes obsolete in 18 months. But Unix provides you with a base of tools and knowledge that you can keep using for years, even decades
- Because knowledge of command-line tools is essential to improve your everyday productivity
- Because is simple, very powerful, and incredibly elegant
- Because real Hackers don't need a graphical interface.. and for most of the tasks, a keyboard is much faster than a mouse
- Because is not just a different operating system, it's a different way to think!
- Because ... have you ever tried to remotely configure a Windows PC?

# Grading

- Written final exam at the end of the course
- Homework assignments will be online in 3/4 weeks (tentative)

# Honor and Integrity

- Everything you submit for the course homework must be the result of **your own** personal effort
- No copying among students will be tolerated
  - **All parties** involved in cheating will be punished (no matter who copied from whom!)
- Internet is an incredible source of information
  - Use it!  
But don't just cut&paste existing code

# Feedback

- Any feedback on the course is much appreciated
  - Tell me if you don't understand something
  - Tell me if you don't like something
  - Tell me if I am speaking too fast
  - Tell me if the slides are not clear or if you find any error/typo
  - ...
- Don't be shy and help me to make a better course

## COMPUTER HOLY WARS

HOLD IT RIGHT  
THERE, BUDDY.
