

CASE STUDY 024

[R]

Bike journeys

Here are some clues in case you are stuck with the case study:

1. Sys.time() will tell you the current time. For question 6 you will need the time before you run the code and the time after the code has finished
2. Some dplyr functions you will need
 - a. group_by
 - b. mutate
 - c. summarise
 - d. arrange
 - e. filter
