

WORKSHOP 038

[Tableau]

Sales orders and case analysis

Here are some clues in case you are stuck with the case study:

1. You will need to use a FIXED level of detail (LOD) calculation.
2. This one is pretty straight forward, so no hint is required 😊
3. Use the pages shelf and ensure that you display the history of marks.
4. Calculate the daily closing position using table calculation (Extra tip: WINDOW_SUM)
5. Use a parameter which is linked to assign the colour dynamically based on input by the user.
