# CASE STUDY 003

[Tableau]

Brazilian Tourism Trends

Here are some clues in case you are stuck with the case study:

1. For chart #1 try using an area chart.

2. For chart #2 try using a piechart.

3. For chart #3 try using a barchart.

4. For chart #4 remove the hierarchy if Tableau automatically creates one. Also make sure you set the map to Brazil (click the 'Unkown' indicator in the bottom right corner if the map is blank).

5. For chart #5 – again, make sure that the automatic hierarchy has been removed. In this case study it works against you because the Country column refers to the country from which the tourists departed and the State column refers to the state in Brazil where the people arrived. These are not related hierarchically.

6. For chart #6 try using a barchart.
